Nursery	<input type="checkbox"/>		Commercial	<input type="checkbox"/>	
LUAllot	<input type="checkbox"/>		Industrial	<input type="checkbox"/>	
Orchard	<input type="checkbox"/>				

Description	Valley is dominated by woodland with small areas of pasture and arable land. Wetland to West of area with scrubby vegetation to valley sides. Pylons run from North to South through west of area. Robin Hood way runs through area and bridleway runs from west to east along west of area. Small scale water related structures (pumphouse and sewage treatment?) in west of area.
Vulnerability	Loss of pasture and woodland to arable land use.

Woodland Cover

Extensive	<input checked="" type="checkbox"/>	Dominant	Hedgerows (trees and shrubs)	<input type="checkbox"/>	
Interlocking	<input type="checkbox"/>		Ditches	<input type="checkbox"/>	
Linear	<input type="checkbox"/>		Walls	<input type="checkbox"/>	

Fragmented ☐
Fences ☒ Apparent

Hedge (shrubs) ☒ Insignificant
Tree line, belts ☐

**Woodland Cover /
Boundaries Description**

Poplar plantation with Ash and Oak south of Elkesley (MLA). Willow, Poplar and Alder fringes alongside River Poulter. Woodland near ford South of Crookford Farm dominated by Birch. Woodland to South West of Crookford Farm is dominated by Scot's Pine. New woodland (Beech and Oak) and hedgerow planting in area around Pylons.

Boundaries mainly Post and Rail in East of area. Some post and wire fencing in near to pylons in western area. Some strong Hawthorn hedgerows adjacent to bridleway in west.

Vulnerability to change

Mature Poplar plantation of all one age south of Elkesley. Some woodland liable to flooding.

Historic Pattern - Description

River valley which has not changed much since Sanderson's Plan. Elkesley Mature Landscape Area lies to East of LCP.

**Historic Pattern -
Vulnerability to change**

Possible loss of woodland to arable farm use. Possible loss of pasture in east of area due to domestic use.

Overall Character Summary Statement

River valley with small scale meandering river. Dominated by woodland with small areas of pasture and arable land use. Significant Poplar plantation to South Elkesley. Coniferous plantation edged with Alder in west of area. Birch and willow woodland near ford at re-cycling plant.

Significant wetland area to western section of LCP. Scrubby vegetation to valley sides to the west. Fly-tipping apparent near to ford at timber recycling depot. Electricity pylons run through the area from North to South in the west of LCP. Robin Hood Way crosses the area twice with footbridges across river. Bridleway runs from the A614 in the west to Crookford Farm in the East.

Short distance views to the South restricted by woodland. More open views to the north but restricted by landform. Open views to A614 to the west.

SH26-1

CharType	Sherwood	LDURef	LDU389	Date	15/03/2006	Surv	TB/HJ
Conditions	Overcast, dry.		OS East	466751	OS North	373118

Nursery	<input type="checkbox"/>		Commercial	<input type="checkbox"/>	
LUAllot	<input type="checkbox"/>		Industrial	<input type="checkbox"/>	
Orchard	<input type="checkbox"/>				

Description	Approximately 50% arable (cereal) farmland to West and 50% pastoral in East of area. Water courses are bordered by fringes of trees and shrubs. Pylons run through area from North to South. Tracks/footpaths run through area including the Robin Hood way. B6387 runs from north to south through centre of LCP. Disused mineral railway runs through centre of LCP from North East to South West from former colliery. The only farm within the area is Haughton Hall Farm with some isolated residential properties in association, also isolated properties at the hamlet of Haughton.
Vulnerability	Further removal of hedgerows, futher loss of existing field pattern. Changes to farming practice could result in change in land use eg: Biomass crops.

Woodland Cover

Hedge (shrubs) ☒ Insignificant ☐ Tree line, belts ☐

Woodland Cover / Boundaries Description Conjure Alders is wet acidic woodland in south west corner of LCP. Small clumps of woodland comprising Alder, Poplar and Willow border water courses/field boundaries. The more significant hedgerows follow the footpaths/tracks such as along Meadow Lane. This has a mixed hedge Hawthorn, mature Ivy, and Ash trees. Robin Hood way hedgerow is mainly Hawthorn. Remaining internal hedgerows are gappy Hawthorn. Raised railway track has scrubby tree and shrub borders. Most internal field boundaries are post and wire fences with occasional trees.

Vulnerability to change Further loss of hedgerows. Boundary trees under pressure from arable farming/ploughing around them.

Historic Pattern - Description Field pattern at time of Sanderson's has been changed by hedgerow removal. Land use of Hop cultivation has disappeared, but building at Haughton Hall farm could be former hop drying building?. Lound Hall parkland has now become pasture and parkland trees no longer remain.. More parkland also shown south of Bothamsall which has now disappeared. The shape of Conjure Alders boundary remains as it was at time of Sanderson's plan.

Historic Pattern - Vulnerability to change Hedgerow removal resulting in further deterioration of Sanderson's field patterns. Further deterioration of mature hedgerow shrubs along Meadow Lane. Farm traffic could erode brick bridges over water courses on PROW.

Overall Character Summary Statement

Flat landform bounded by River Meden (North) and River Maun (South), smaller watercourses also run along valley floor. Open landform enclosed by plantations to South, East and West and enclosed by higher landform to north (Bothamsall). Medium distance views enclosed by wooded skylines to the south and higher ground to the North. Longer distance views to Thoresby Estate woodland to the West and Bevercotes Colliery woodland to the east. Approximately 50% arable (cereal) farmland to West and mostly pastoral in East of area. Water courses are bordered by fringes of trees and shrubs. Pylons run through area from North to South. Tracks/footpaths run through area including Robin Hood way. B6387 runs from north to south through centre of LCP. Disused railway runs through centre of LCP from North East to South West from disused Bevercotes colliery.

Threats to area include further loss of hedgerows and possible change in landuse eg: to biomass crops. Remaining internal hedgerows are gappy with significant hedgerows remaining along Public Rights of way with mature trees and shrubs along Meadow Lane and Hawthorn hedges along Robin Hood Way.

Conjure Alders woodland remains in south west of LCP as it was in Sanderson's plan. Most internal field boundaries comprise of post and wire fences with occasional trees. Small deciduous woodland clumps neighbour water courses throughout field pattern.

Further loss of hedgerows could result in further deterioration of Sanderson's field pattern. Boundary trees are under pressure from landuse/ploughing. Lound hall parkland has now become pasture with complete loss of parkland trees. Area south of Bothamsall shown as parkland has now become agricultural land also with loss of parkland trees. Farm traffic could erode brick bridges over water courses.

Historic Pattern - Description

Regular medium sized geometric field pattern. West Drayton Avenue runs from Clumber in the West to West Drayton in the East - historic avenue. Most of existing woodland dates present in Sanderson's (1835).

**Historic Pattern -
Vulnerability to change**

Loss of hedgerows due to arable land use, Loss of historic field pattern, Poor management and fragmentation of historic hedgerows, further decline of avenue trees.

Overall Character Summary Statement

Gently undulating landform dominated by arable land use, medium sized geometric fields enclosed by Hawthorn hedges, Interlocking woodland dominates landscape to the North of the LCP, with arable land use in the areas between the woodland. Historic Avenue runs from west to east along LCP and now forms part of the Robin Hood Way. Electricity Pylons runs from North to South across the LCP and a Oil Well lies to the centre of the site. Designated SINC at Spitfire Hill. Arable land use dominates land use to south with small blocks and linear belts of trees. Views are generally open due to relatively flat landform and low nature of hedgerows. Landform slopes gently downhill from East to West.

**Woodland Cover /
Boundaries Description**

Clumps of mixed woodland with Oak and Scot's Pine. Strong band of coniferous along field boundary to the East of Broad Lane. Parkland trees and wood around Worksop Manor.

Ancient Woodland at Sloswicks Springs to the South-West of the area.

Hedgrows are dominated by Hawthorn with some parts including Holly and Field Maple.

Vulnerability to change

Some mature trees dying back. Possible loss of Woodland to Arable land use. Further deterioration of Hedgrows.

Historic Pattern - Description

Parkland features of Manor Park are still apparent, but some loss of tree avenues has occurred. Some tree clumps (Sanderson period) still exist. Small to medium Geometric fields.

**Historic Pattern -
Vulnerability to change**

Loss of hedgerows due to arable landuse, further deterioration of Manor Park.

Overall Character Summary Statement

Flat to gently undulating landform with Worksop Manor on higher ground to the North. Historic Parkland of Manor Park visible over long distances. Area dominated by arable fields with some pasture. Fields enclosed by hedgrows in generally good condition. Hedgrows predominantly Hawthorn with some Holly (Broad Lane) and other species. Scattered clumps and bands of mixed woodland dominated by Oak and Scots Pine. Farmtracks enclosed by strong Hawthorn hedgrows particularly to the North of Oak Wood an avenue of Ash trees to the west of Castle Farm. Network of public footpaths in area. Some ditches along field boundaries. Some unimproved pasture to North of Broad Lane - undrained field with rushes.

Historic Pattern - Description Historic parkland with associated buildings and Lodges. Formal layout of roads from lodges to centre of Clumber Park. Some smaller fields and woodland clumps have been enclosed in woodland planting.

Historic Pattern - Vulnerability to change Loss of hedgerows due to arable landuse, some loss of parkland to coniferous planting. Rhodedendrons dominating ground cover of woodland in some places to the detriment of native species.

Overall Character Summary Statement

Gently undulating parkland landscape. Dominated by mixed woodland and coniferous planting. Thoresby Park and Clumber Park (National Trust) both tourist attractions with associated shops, cafes, car parks, etc. Typical parkland features - Mature trees in grass areas and clumps of trees, lakes, avenues, gardens and Historic buildings. Areas of heathland are common within Clumber Park.

Network of paths including the Robin Hood Way which runs through Clumber Park. Buildings at Hardwick Village and Clumber are largely redbrick. Thoresby Hall and associated buildings are largely stone.

Small areas of arable farming and pasture enclosed within woodland areas. To the west lies an area of small to medium sized arable fields with low trimmed hedgerows.

Other natural features present: **River** ☐ **Stream** ☐

Description Generally this is a gently undulating landscape which rises up to a ridge line north of Church Warsop upon which there is deciduous woodland. The A60 passes through Cuckney Hill in a very slight cutting. Around the spoil heap of the mineral workings are localised steep sections of worked land. The landform drops down to the north to the River Poulter which is outside this lcp and to the south to the River Meden which is also outside this lcp.

Views There are medium distance views out to wooded skylines and some built settlements from the southern edge of the lcp with views out to Welbeck Park to the north of the area.

Description Broadleaved woodlands of oak birch and occasional sweet chestnut, with sycamore along the ridgeline that runs approx. east west. Large arable fields with trimmed hawthorn hedges that were gappy in places. Post and rail and post and wire fencings around areas of sheep grazing. There was a spoil tip to the north west of Meden Vale which had been restored to grassland for grazing. Cuckney village a small stone village lies to the north west edge of this area.

Vulnerability Fragmented hedgerows loss of existing field pattern, with some areas of woodland not appearing to be particularly well managed. Farmland next to the urban edge subject to housing expansion and urban pressures such as fly tipping.

**Woodland Cover /
Boundaries Description**

There were areas of mixed woodland within Cuckney Hay wood and Park House Plantation. This was made up of Scots pine oak, birch and sweet chestnut with some non native pine. There were areas of deciduous woodland of sycamore and sweet chestnut that had been coppiced possibly 50 years ago. There was the occasional exotic coniferous tree within woodland along Gleadthorpe Breck plantation

Hedgerows were generally trimmed hawthorn with some larger outgrown hedges in places.

Vulnerability to change

The deciduous woodland all seemed to be of one age.
The hedgerows were gappy in places where arable fields were dominant.

Historic Pattern - Description

Regular large geometric field pattern, with possible remnants of aristocratic estates such as around Coronna Lodge with its lime tree avenue and stone lodges.

**Historic Pattern -
Vulnerability to change**

Some of the lodges appeared to be in poor condition. Fields have generally got larger and the mineral workings have also taken out existing field patterns.

Overall Character Summary Statement

This is an area of mostly arable fields on the lower ground with woodland on the ridgeline. Meden Vale and Church Warsop are adjacent to the southern boundary and along with the mine have an urbanising influence on this landscape. To the north the character is more estate like with avenues and lodges being the fringe of Welbeck estate. The landform is gently rolling with views out of the area to wooded skylines. Vegetation along road sides included bracken and gorse. There is quite a bit of stone vernacular construction both in the farmhouses, barns walls and estate lodges.

**Woodland Cover /
Boundaries Description**

Scot's Pine Plantation to South of area with deciduous amenity edges (Birch, Hornbeam and Oak). Northern Golf Course is a SINC and contains managed Heathland. Mixed avenue of mature trees leads into College including Cedar. Mature trees neighbour the college grounds.

Mature Holly hedges and trees along Old Coach Road. Gappy hawthorn hedgrows to internal field boundaries to the south of area around Clumber Lane Farm, road edge hedges are more well maintained adjacent to the farm.

Southern Golf course is in early stage of development includes amenity planting.

Vulnerability to change

Changes in Forestry practice could result in removal of some of the coniferous woodland. Poor maintenance of hedgrows could result in loss of field pattern.

Historic Pattern - Description

Sanderson field pattern of medium to small, regular geometric fields are intact around Clumber Lane Farm. Woodland pattern has remained although some is now plantation woodland.

Some loss of historic field pattern due to Golf courses and college.

**Historic Pattern -
Vulnerability to change**

Loss of hedgerows due to arable landuse, poor management and fragmentation of historic hedgerows.

Overall Character Summary Statement

Gently undulating landform, gently sloping from East to West. Medium distance views enclosed by wooded skylines. Scot's Pine Plantation to South of area. Golf courses and College grounds exist amongst some arable farmland. Small loss of field pattern due to loss of hedgerows around Clumber Lane Farm. Northern Golf course contains SINC and has managed Heathland. Southern golf course is in early development. Mature holly hedges with holly trees along Old Coach Road. Mature trees along avenue into college grounds which include more mature trees. Intact field and woodland pattern around Clumber Lane Farm as in Sanderson's Plan. Overall continuing loss of field pattern and possibility of change to mature Coniferous plantation due to felling of mature trees.

Fragmented	<input checked="" type="checkbox"/>	Insignificant	Fences	<input type="checkbox"/>	

Hedge (shrubs) ☒ Insignificant ☐ Tree line, belts ☒ Prominent ☐

**Woodland Cover /
Boundaries Description**

Various small scale woodlands (Manton Wood and Broom Wood) predominantly Coniferous. Colliery restoration woodland (mixed planting) mainly newly planted Pine. Sherwood heath species woodland around Golf Course (Oak, Rowan, Birch)

Ashton's wood is a Scot's Pine woodland but an extension of the Osberton Hall Mature Landscape Area.
Morton Park is mature Parkland.

Shelter belts of clear stemmed mature Scot's Pine, some underplanted with younger trees. Roadside hedgerows on A1 slightly grown-out and similar with some hedgerow trees along Retford Road (Oak, Ash). North of Old Coach road there are remnants of mature woodland species (Oak, Birch and Pine). Avenue of mature Lime trees to Green Drive.

Vulnerability to change

Shelter belts are a prominent visual feature, although a small proportion of area, and are all of same age mature trees, their loss will have a significant visual impact. Possible removal of small woods due to continual development. Possible further loss of hedgerows due to arable farming.

Historic Pattern - Description

Regular geometric field pattern, loss of Sanderson's smaller field pattern. Some Sanderson's woodland pattern still exists (Broom Wood and Manton Wood).

**Historic Pattern -
Vulnerability to change**

Pressure on remaining small woodland due to development. Further loss of hedgrows due to arable farming.

Overall Character Summary Statement

Gently undulating landform sloping from South West to North East, imperceptible valley side of Chesterfield Canal and River Ryton. Medium distance views enclosed by Pine belts in North East of area and woodland surrounding Morton Hall. In west new developments obscure and enclose views. In south of area views enclosed by Manton Plantation, Colliery planting and Top Wood. Large to medium geometric fields enclosed by Scot's Pine Belts. Small woodland clumps are generally Coniferous. Railway runs from East to West through Area. Morton Hall in North East surrounded by Parkland.

Commercial development in South West of area including B&Q and Wilkinson distribution depots and Manton Enterprise Zone encroaching on existing woodland. Possible further loss of historic field pattern due to loss of hedgerows. Sanderson's field pattern has already changed significantly, due to hedgerow loss resulting in fewer yet much larger fields. Some woodland has also been lost due to development. Possible threat to existing Scot's Pine Belts due to uniform maturity although some belts are seen to be underplanted.

Description Mixed farmland with arable and sheep grazing. Clumps of mixed woodland and corner copses are predominantly Oak and Sycamore. Coniferous plantation to south west of LCP. Elkesley village lies to the east of the LCP. Sewage works lie to the south of Brough Lane. There is a dense network of narrow hedged lanes. The Robin Hood Way runs along Brough Lane to the South.

Some permanent pasture to South of Elkesley with strong bushy, mixed hedgerows with Hawthorn, Maple, Elder and Ash.

Recycling centre to the south of cross lane - woodchippings. Large scale agricultural/processing sheds within compound.

Vulnerability Willow plantation to west of Cross Lane - possible expansion of biomass crop. Hedgerows generally well maintained along roadsides, some more gappy field boundary hedges. Some tall overgrown hedgerows could become more gappy if not well managed. Possible extension of recycling operations. Further loss of historic field pattern due to arable farming.

Historic Pattern - Description

Historic settlement - Elkesley village surrounded by small scale pasture enclosed by tall bushy hedgerows. Larger scale geometric fields to the west of the LCP. Woodland clumps and corner copses surviving from Sanderson's period.

**Historic Pattern -
Vulnerability to change**

Loss of hedgerows due to arable land use, Loss of historic field pattern, Poor management and fragmentation of historic hedgerows. Possible further expansion of recycling centre into woodland. Possibility of housing development.

Overall Character Summary Statement

Gently undulating landform sloping south to the river Poulter. Medium distance views enclosed by wooded skylines to south. Largely arable land use. Medium sized geometric fields. Smaller fields enclosed by tall mixed hedgerows to the south of Elkesley village. Network of Hedge-lanes and footpaths including the Robin Hood Way. Bridleway from Crookford Farm runs west to Clumber Park. Scattered clumps and copses of deciduous woodland mainly to west of LCP. Cross Lane is tree-lined Oak and Sycamore. Biomass willow plantation lies to the west of Cross Lane. Recycling centre (woodchippings etc.) with large scale sheds enclosed by metal Palaside fencing lies to the south at Crookford Hill. Sewage works lies to the South of Brough Lane. The landscape to the south is dominated by the woodland along the river Poulter. Elkesley village is largely red brick and Pantile roof buildings. Many of which are listed buildings. More recent housing has been built between Coal Pit Lane and Brough Lane.

Orchard	<input type="checkbox"/>				

Description Intensive arable farmland predominantly with hawthorn hedge boundaries. Some pasture lies close to village fringes. Power line route across from north to south. West Drayton Avenue runs from east to west of area. The LCP contains two farms and the village of Bothamsall itself as well as a small oil well and some coniferous woodland to north of area. There is a small area of lakes and scrub which is a SINC to the north east of village.

Vulnerability Further deterioration of remnant avenue trees, some loss of historic field pattern due to loss of hedgerows within arable land, limited expansion of housing around village are all possible.

Woodland Cover

Hedge (shrubs) ☒ Apparent ☐ Tree line, belts ☐

**Woodland Cover /
Boundaries Description**

Largest area of coniferous woodland lies to North of area around Broom Hill and east of Spitfire Hill. A small mixed copse including Hawthorn, Scot's Pine, Oak, Holly lies to West of LCP.

Roadside hedges are low trimmed, well maintained, including Hawthorn, Holly and Ivy. Some hedgerow trees including Ash, Holly and Oak. Internal field boundaries consist of Hawthorn and are gappy and less well maintained.

West Drayton Avenue runs from east to west of area and is in poor condition with remnants of overmature trees including Sweet Chestnut.

There is also an area of scrub woodland around lakes to north east of village.

Vulnerability to change

Further removal of internal hedgerows and further deterioration of avenue due to ploughing around base as this is now located within arable farmland.

Historic Pattern - Description

Historic settlement, irregular geometric field pattern, with remnants of aristocratic estates, Sanderson woodland outline remains to north of area. Motte known as Castle Hill lies to the west of Bothamsall south of LCP with mature Oak trees to its central mound.

**Historic Pattern -
Vulnerability to change**

Loss of internal hedgerows due to arable landuse, decline of avenue trees due to being over mature and damage by farming around them..

Overall Character Summary Statement

Gently undulating valley side. Road to Bothamsall from A614 follows ridge line between River Meden and River Poulter. Land Slopes getly to North east valley side of River Poulter and more steeply to Meden. Fairly long distance views enclosed by coniferous wooded skylines. Arable land use dominates, some pasture in village fringes. Village of Bothamsall lies to south of area. Haughton Farm with kennels lies to North East corner. Small oil well lies in the west. Some woodland to north at Broom Hill and Spitfire Hill. Remnants of avenue runs from east to west.

Further deterioration of over mature avenue trees is likely. Some loss of historic field pattern due to loss of internal hedgerows is likely. Possible expansion of village (not changed in size much since Sanderson's plan) is also possible.

Fringes of coniferous woodland lies to north of area, small copse's lie within arable fields. Middle section of Redhill Lane is sunken with trees along the banked verges.

Other natural features present: **River** ☒ Apparent **Stream** ☒ Insignificant

Description	The B6387 passes through the central flat area of the LCP at 32 m approx, the area falls to 23m to the south in the valley of River Meden and similarly to the north to 24m to the Poulter Valley. The valley of the River Meden swings round within LCP to join the Poulter. There are also artificial mounds created as part of the restoration of Bevercotes Colliery.
Views	Views are very variable within the LCP, many short distance views are enclosed by woodland within the colliery boundaries. There are longer distance views from the top of the Bevercotes tip mound but these are still enclosed by wooded skylines particularly to the west and south. There are more open views to the north of B road across farmland as far as Poulter valley.

LUAllot	<input type="checkbox"/>	Industrial	<input checked="" type="checkbox"/>
Orchard	<input type="checkbox"/>		

Description	The greater proportion of the LCP is within the boundaries of the former Bevercotes colliery, current land uses within this consist of coniferous forested areas with some deciduous woodland strips fringing the River Meden, areas restored for amenity use, large areas of concrete hard standing, and access roads and also a number of lakes. Outside the area other landuses include arable farmland with some pasture areas nearer to farm buildings of School farm. Industrial uses include sub stations. There is also some coniferous woodland outside the colliery area within farmland. There are 2 farms within LCP - Houghton Park Farm and School Farm and one residential property to the south of area. The West Drayton avenue continues through this LCP.
Vulnerability	This is dependant on the final restoration of the Bevercotes area which may include industrial development involving removal of woodland. There may be further loss of internal field boundaries as has already happened around School Farm. There may be further woodland loss outside the colliery area. There are many mature trees within the LCP as part of the avenue and within the colliery area which are over mature and may deteriorate further.

Hedge (shrubs)	<input checked="" type="checkbox"/>	Apparent	Tree line, belts	<input type="checkbox"/>	<input type="text"/>

Woodland Cover / Boundaries Description There is commercial forestry within the colliery area with older more deciduous woodland such as Lawn Covert (also a SINC) which have been surrounded by later forestry plantings. These older areas contain mature trees including lime avenues to the colliery estate roads. Woodlands outside are generally small areas of coniferous woodland with fringes of deciduous woodland. Elkesley Wood is part of an MLA. (West Drayton Avenue MLA is unimproved pasture.) West Drayton avenue is stronger in this LCP than LCP 42 with mixed mature trees species. Road boundary hedges are predominatly Hawthorn with some post and rail fences with few trees. Internal boundary hedges are hawthorn .

Vulnerability to change There are many mature trees within the colliery area including Lime avenues which may deteriorate further due to maturity and lack of maintenance. There are also mature trees to West Drayton avenue which suffer the additional pressure of being within arable farmland areas. Further removal of field boundaries is possible. Possible expansion of commercial forestry or removal of forestry due to development is also possible.

Historic Pattern - Description To the north of B6387 the Sanderson pattern is largely intact with irregular geometric small to medium fields. West Drayton avenue and woodland pattern all as Sanderson plan. Colliery development has obliterated the farmland pattern but this contains remnants of earlier woodland such as Lawn covert and parkland which is part of Lound Hall.

Historic Pattern - Vulnerability to change Possible further development of colliery area may lead to woodland removal, possible loss of hedgerows to north of B6387, mature trees are vulnerable due to over maturity.

Overall Character Summary Statement

The landform is flat to the central area of the LCP falling away to the south and north to Meden and Poulter valleys, there are artificially created high points within the restoration scheme of the Bevercotes Colliery which has been restored in part to amenity use. Views are varied and are either contained by close belts of woodland or by wooded fringes at a greater distance. The landuses within the LCP are varied with a high proportion of commercial forestry within the colliery area, arable farmland outside the colliery area, with some pasture closer to farms and also smaller areas of coniferous woodland. Deciduous woodland is confined to fringes of the River Meden and edges of the coniferous woodlands. There are limited industrial and residential land uses. The main threats to the area are dependant on the afteruse of Bevercotes colliery which may be used for light industrial devpt. Which may lead to removal of woodland. Other threats are further removal of field boundaires. There are a number of mature trees in the LCP which will deteriorate with out maintenance as they are over mature such as West Drayton Avenue which is a distinct visual feature running through the LCP.

Description	Intensive arable large geometric field pattern predominantly hawthorn hedges. Coniferous woodland with some broadleaved edges run along western limits. Some small deciduous woodland blocks, esp to north. Agriculture is interspersed with other land uses - caravan park, scout camp, agricultural distribution centre and the village of Walesby. The residential estates of Ollerton form the southern boundary. Electricity pylons cross the area. The Robinhood Way long distance footpath runs through the northern half of the LCP.
Vulnerability	Gappy hedgerows may decline further. Field boundaries have been recently lost and field sizes may continue to increase. Possible expansion of Ollerton to south and the fringes of Walesby. Some fly tipping observed.

Hedge (shrubs) ☒ Dominant ☐ Tree line, belts ☒ Insignificant ☐

Woodland Cover / Boundaries Description Woodland in the west is mainly coniferous with deciduous fringes (scots pine, birch etc), some used for recreation.
Woodland blocks, esp in the northern area were generally broadleaved - birch, ash, oak. Some small new planting blocks along side B6387.
Hedgerows often gappy and missing. Where present, trimmed and low with occasional hedgerow trees. Gorse to roadside near pumping station.
Walesby Forest MLA to west containing-
i. Ancient parish hedge to north of Forest Lane (field maple, hawthorn, crap, english oak, holly, wych elm).
ii. Area of heathland nr Walseby scout camp.
iii. acidic grassland, mature scots pine, larch, oak
iv. Wet acidic woodland.

Vulnerability to change Continual decline of gappy hedgerows.
Further leisure development into Walseby forest may compromise integrity of the woodland.

Building Style

Vernacular ☒ Apparent Non-vernacular ☒ Apparent

Historic Pattern - Description Regular large geometric field pattern, incorporating some historic boundaries. Much of small scale field pattern around Walesby has been lost. Woodland pattern is similar to historic map (Sandersons 1835).

Historic Pattern - Vulnerability to change Continual loss of field boundaries to create larger fields is apparent.

Overall Character Summary Statement

Gentle rounded landform, dominated by arable fields. Large, geometric fields are bounded by low hedgerows, often gappy /lost. Woodland blocks are either broadleaved (to north) or coniferous plantations with broadleaf margins to west. Walesby village sits in the centre of the area, with Ollerton making up the south boundary of the LCP and some large agricultural buildings off the B6387. None agricultural landuses are scattered through the area - Caravan park and scout camp west of Ollerton and Robinwood Way in north. Main threats of change are expansion of Ollerton from the south and loss of remaining hedgerow boundaries.

Woodland Cover / Boundaries Description Only small fragments of woodland exist such as Earth Holme plantation to the northern end of LCP. There is a strong line of riparian vegetation including mature Willow along Boughton Dyke. Hedgerows to road edges are strong and well maintained with trees - Oak, Ash, Horse Chestnut. Field boundary hedgerows are more variable mostly Hawthorn. Boughton Industrial estate is very well vegetated but with non native species eg Lime avenues and also ornamental species to plot boundaries. The estate is surrounded by heathy Birch woodland which is a SINC.

Vulnerability to change Threats include intensification of agricultural uses, additional biomass crop planting, and expansion of the industrial estate.

-------------------	-------------------------------------	-----------	-----------------------	-------------------------------------	----------

Historic Pattern - Description The irregular field pattern still reflects the historic pattern but some intervening field boundaries have been removed, remnants of the strip field pattern remain around Kirton.

The core of Kirton village retains red brick and pantiled roof buildings and farms with more modern infill.

The sanderson pattern has been lost in the area of Boughton Industrial Estate

Historic Pattern - Vulnerability to change threats include further infill development which will increase the amount of non vernacular buildings, and further removal of the historic field pattern due to intensification of agriculture.

Overall Character Summary Statement

This is narrow area which initially follows the course of the Boughton Dyke which is marked by a strong band of riparian woodland including mature willows. The LCP is at the junction of the Sherwood and Mid Notts Farmlands LCA and land rises steeply to the East immediately outside the boundary. There are distant views to the west, to the east these are closed by the wooded ridge. Landuses include the industrial estate at Boughton which is surrounded by woodland, arable farming, and pasture including cattle grazing, part of the residential area of Kirton Village and a small section of the former Ollerton Colliery. Mixed species hedgerows are strong to road boundaries with trees including Oak, they are more variable to field boundaries and mostly Hawthorn. The historic pattern is recognisable but hedgerows have been removed and the landuse has changed from hop growing in the valley to other agricultural uses. The strip field pattern survives around the historic core of Kirton Village. The main threats to the area are further loss of the historic pattern due to intensification of agriculture, industrial expansion, and biomass planting.

Historic Pattern - Description	Historic settlements, including Retford, West Drayton, Rockley and Milton. Retford has undergone significant expansion, but the three hamlets by comparison have shown little growth over time (Sanderson's Map). Irregular field pattern following course of the River Idle, although the boundaries are changed somewhat from the historic layout.
Historic Pattern - Vulnerability to change	Further loss of hedgerows in close proximity to the river. Loss of historic field pattern through arable intensification Absorption of surrounding villages into Retford as the town has expanded

Overall Character Summary Statement

A flat landform confined to the river corridor and flanking low-lying fields, which are predominantly arable, with some interspersed pasture. Areas of wet grassland, swamp and wetland can be found along the corridor, accompanied by small blocks of woodland. The river course frequently has lines of trees. Hedgerows are not a consistent feature. Although the land is flat, the winding nature of the river and intervening tree cover restricts views, and these are only more open beyond the short range where woodland is absent or the river runs a straighter course in places.

Description	Gamston airport to the south with light industrial and commercial land uses to the perimeter. The remainder of the LCP is open arable farmland crops include Barley, Oil seed rape, some fields of set aside, small amounts of amenity grassland and pasture to edge of airfield. Small area of biomass planting to south. Isolated farms are the only other buildings There are 3 SINC sites within the LCP -Reference 5/1239 Brick Road Yard ponds , 5/358 Gamston Airport Scrub and Grassland, and 2/408 Eaton Breck Farm track.
Vulnerability	Extension of airport development, intensification of agricultural use, additional biomass crop planting.

**Woodland Cover /
Boundaries Description**

There are small fragments of woodland within LCP surrounded by arable farmland, such as Breck Plantation, Apple Pie Plantation- Oak is the dominant tree species. Fox Covert and Eaton Bogs woodlands also contain Scots Pine. Hedgerows to roads are variable but generally dense and well maintained, generally hawthorn but some other species - Honeysuckle, Elder. Oak trees to road hedgerows also Sycamore . Field hedges vary from dense to gappy in places generally Hawthorn with standard trees in places. Lines Willow trees to minor stream courses cross the LCP.

Vulnerability to change

Intensification of agriculture, further development of airport. Short rotation coppicing biomass crops.

Historic Pattern - Description

Irregular geometric field pattern, plus open airfield area with associated infrastructure.

The construction of the airport has obliterated the historic field pattern in this area and has also led to the removal of large woodland present on Sanderson plan.

Sanderson plan shows further removal of field boundary hedges to enlarge fields. Fox Covert, Apple Pie Plantation , Breck plantation all present on plan.

**Historic Pattern -
Vulnerability to change**

Threats include further loss historic pattern of field boundaries due to agricultural expansion, and further loss of woodland.

Overall Character Summary Statement

The LCP has a gently undulating landform rising from east to west. the southern area on which Gamston Aripport is located is much flatter. Distant views are contained by the undulating landform, there are distant views to the east as far as the Trent Valley. Landuse is predominantly arable except for the airport and its infrastructure surrounded by light industrial uses to the south. There are small woodlands many dating back to 1835 mostly surrounded by arable land uses, Oak is the dominant tree species., Roadside hedgerows are variable in quality but generally good consisting of dense Hawthorn with Oak standards. Fields hedgerows are more variable and mainly Hawthorn. The only settlements are isolated farms in the vernacular style of red brick and pantile roofs. The historic pattern has been removed to the south due to the airport construction, to the centre and north many hedgerows have been removed although the historic pattern is still recognisable. Threats to the area include the expansion of the airport, agricultural intensification and additional biomass planting..

Description	Mostly arable farmland with interlocking woodland blocks and shelter belts. Field size small to medium with mainly low trimmed hedgerows. Small areas of pasture close to Ranby Village and Ranby Cottage farm to the North. Coniferous plantations, mixed and deciduous woodland - Beech, Yew and Oak. Remnants of Parkland landscape at Ranby Hall including avenue trees. School and Prison lie to North of A620 with significant native and ornamental planting to the grounds. Chesterfield Canal runs West to East across the centre of the LCP. Significant A shaped beech hedge to boundary of Old London Road and Green Mile Farm. Nursery lies behind said hedge, to north of Green Mile Farm. Electricity Pylons run from North to South in Centre of LCP. Pylons also run From South West to North East in the South East of LCP. Small village settlement of Ranby in South West of LCP - Barnby lies to North East. Scattered Farms also lie within area. Sewage works lie to East of HM Prison.
Vulnerability	Fragmented hedgerows loss of existing field pattern. Possible expansion of Nursery and Prison Grounds could result in loss of farmland or Woodland. Further loss of Parkland trees at Ranby Hall. Further sub-division of fields for horses. Possible widening of A1.

Historic Pattern - Description Historic settlements of Ranby and Barnby Moor. Scattered farms, majority of buildings are red-brick and pantile roofed. Several listed buildings lie within LCP. Historic parkland surrounds Ranby Hall, with remnants of avenue. Majority of trees are Oak, Beech and Sycamore within Ranby Hall Parkland. Chesterfield Canal (BIOSINC) runs from East to West of LCP. Ranby House is now part of Preparatory School. Field pattern remains largely intact, area to south and west of Barnby Moor has lost some historic field boundaries.

Historic Pattern - Vulnerability to change Loss of historic field pattern, poor management and fragmentation of historic hedgerows. Deterioration of Parkland landscape around Ranby Hall.

Overall Character Summary Statement

Gently undulating landform, with regular geometric field pattern of arable farmland. Majority of internal field boundaries are low trimmed hawthorn which are gappy in places. Small areas of pasture around Ranby village and Ranby Cottage Farm. Small scale woodland is deciduous and includes coniferous plantations. Woodland surrounds farms and shelter belts and tree belts are common as field boundaries. Canal runs west to east across centre of LCP railway line runs west to east along southern boundary. Ranby Hall with surrounding parkland lies to centre of LCP. Pylons run from North to South across LCP and to the South East. Cuckoo Way footpath runs along Chesterfield Canal crosses Green Mile Lane which runs through Ranby Hall to the South East. School, Prison and Sewage works lie to North of the A620.

Historic Pattern - Description Regular large geometric field pattern,

Historic Pattern - Vulnerability to change Loss of hedgerows due to arable land use - field sizes have increased since Sanderson's (1835). Poor management has resulted in gappy fragmented hedgerows.

Overall Character Summary Statement

Gently undulating landform dominated by medium sized geometric field pattern. Predominantly arable land use with small area of horse pasture. Little woodland cover - small blocks of deciduous woodland and shelter belts. Scattered farms regularly distributed within LCP, some of which have listed buildings. Other features include railway line running from west to east, to north of LCP and saw mill to south of LCP adjacent to Jockey Lane, footpath runs west to east across the LCP linking to other bridlways and footpaths to the east. Electricity sub-station and pylons which dominate skyline to centre of LCP.

Views are generally long distance due to flat landform and lack of vegetation.

Historic Pattern - Description

Close resemblance to field pattern as on Sanderson map, although some field boundaries have been lost. Remnant of aristocratic estate - Osberton Hall.

**Historic Pattern -
Vulnerability to change**

Loss of hedgerows where boundaries have fields have been altered due to arable landuse.

Overall Character Summary Statement

A cohesive linear character area. Well maintained varying size and shaped fields with a gently undulating landform, bounded by the prominent A1 in the east and dropping down towards the River Ryton in the west. Boundaries to arable and some pasture fields are formed by trimmed hawthorn hedgerows. Interspersed with coniferous stands and broadleaf woodland parcels. Noteable vernacular character to buildings. Chesterfield canal running through South of LCP adds to traditional character of the area. . Main threats to change in region could result from change in land ownership and management.

Historic Pattern - Description Regular medium to large geometric filed pattern. Remnants of historic tracks. Remnants of historic planned layout of trees to north west (Long Plantation).

Historic Pattern - Vulnerability to change Loss of hedgerows due to arable landuse, Loss of historic field pattern, Poor management and fragmentation of historic hedgerows. Small areas of historic woodland have been surrounded by more recent plantations.

Overall Character Summary Statement

Gently undulating landform which slopes gradually to the south to the River Ryton. Predominantly arable landuse, medium to large scale fields enclosed by low trimmed and gappy hedgerows. Some hedgerows missing. Small coniferous plantation and shelter belt to the south, mixed woodland to the north west. Golf course to the west of the LCP on the edge of Worksop - manicured landscape with non native and ornamental tree planting. Network of bridleways and farm tracks cross the area. Bridleway to north in sunken former track - now heathland vegetation with gorse and bracken and small trees - hawthorn and elder.

Scattered residential properties. Thievesdale House, off the B6045 is a non vernacular 1960s building.

Open views from higher ground to wooded skylines. Views to the west enclosed by Worksop. Views to large scale distribution centres (B&Q, Wilkinsons) to the south.

Steep	<input type="checkbox"/>				

Other natural features present: **River** ☐ **Stream** ☒ Insignificant

Description	The majority of the area has gently undulating landform ranging from 15m adjacent to Chesterfield canal in the north of LCP to 38m in the north western corner of the LCP, There is a steeply sloping wooded area around Ordsall to the east. There is a steeply sloping wooded area around New Plantation to the west. Babworth Park lies at around 24m
Views	The long distance views from Babworth parkland are closed by wooded ridgelines to the south, but views are generally closed by landform looking north towards the Chesterfield canal, or by the steeply sloping wooded landform of Ordsall to the east and steeply sloping area to the west around New Plantation.

Description	Agricultural land uses include arable cereals, as well as pasture areas to the south of A620 and close to Babworth park, there is also a large field of early vegetable production to west of LCP, also horse grazing within Babworth Park. The most steeply sloping areas remain as mixed or coniferous woodland. The mature landscape of Babworth Park consists of woodland, parkland and pasture. Pylons cross the area from North to South, area also crossed by East coast main railway line and line linking Retford and Newark, also many PROWs. Golf course to the south of Ordsall. Cemetery to the western fringe of Retford. New school development to the east of Babworth Park. Recreational facilities include Yoga centre. Isolated residential properties only.
Vulnerability	The Babworth MLA forms the core of the area but this is subject to surrounding development pressure such as the new school complex. Within the park some parkland has have been converted to farmland and estate may decline if insufficient funds for maintenance.. Woodland in steeply sloping areas may be encroached upon by development. Significant hedgerow loss in the south of the LCP since Sanderson Plan.

Fragmented	<input checked="" type="checkbox"/> Apparent	Fences	<input checked="" type="checkbox"/> Insignificant
Hedge (shrubs)	<input checked="" type="checkbox"/> Apparent	Tree line, belts	<input type="checkbox"/>

Woodland Cover / Boundaries Description New Plantation is coniferous woodland which connects with adjacent woodlands to the west, woodland to the east is mixed deciduous woodland consisting of Oak, Sycamore, Beech, Sweet Chestnut but also some Scot, s Pine and Yew. Babworth Park woodland consists of Beech, Sycamore. Whisker Hill consists of typical Sherwood heathland species and Sweet Chestnut. Babworth Parkland trees include Lime, oak. Road side hedges are generally well maintained, and dense with Hawthorn, Hazel, Blackthorn, mature Ivy with hedgerow trees Oak, Ash. Internal field hedges are more gappy hawthorn with few trees. Chesterfield canal(SINC) has a narrow fringe of vegetation. Small woodland within cemetery area but with many ornamental species to the main grounds.

Vulnerability to change Further removal of internal field boundaries, deterioration of parkland landscape particularly mature tree species. Development pressure to the fringes of woodland areas and within Ordsall woodland. Golfcourse extension could encroach further on to woodland and farmland.

-------------------	-------------------------------------	-----------	-----------------------	-------------------------------------	---------------

Historic Pattern - Description Sanderson field pattern to the south has been removed due to development of golf course and removal of all field boundaries. Babworth Park parkland landscape has suffered from encroachment of farmland. To the north the pattern is more intact. Cemetery woods and railway have obliterated pattern on the edge of Retford itself

Historic Pattern - Vulnerability to change

Further loss of internal field hedgerows is likely. Mature parkland trees may decline if not carefully managed and maintained. Development pressure of golf course and new housing may further remove historic pattern in the south of area.

Overall Character Summary Statement

The LCP is generally gently undulating although with some steeper areas to the east and west. Views are contained by close woodland to the east and west and by more distant woodland to the south. Views north are constrained by landform. Landuse is varied consisting of coniferous plantations and deciduous woodland with both arable and pasture areas. Babworth Park forms the central area and includes woodland, parkland and grazing areas. There is also a major development area to the east of Babworth Park and a golfcourse to Whisker Hill in the south as well as a variety of transport routes. There is also a cemetery to the western fringes of Retford. Woodland is coniferous around New Plantation and mixed deciduous around Ordsall and Babworth Hall including mature trees

The major threats to the area are further removal of hedgerow boundaries, development pressure on existing woodlands, decline in condition of Babworth Parkland particularly mature parkland trees without adequate maintenance and other deciduous woodland, also changes in forestry and agricultural practice leading to change in cropping patterns, and type of crop.

Historic Pattern - Description

Parkland of Osberton park and historic woodland to North of area. Osberton Park is a Mature Landscape Area. Historic settlement with a Church at Scofton.

**Historic Pattern -
Vulnerability to change**

Loss of hedgerows due to arable landuse. Loss of historic field pattern. Loss of mature parkland trees.

Overall Character Summary Statement

Landform is gently undulating and slopes south east to the River Ryton. Landscape is dominated by Parkland with sheep grazing and scattered, mature, parkland trees. Small blocks and belts of coniferous and mixed woodland particularly to northern boundary. Medium distance views to wooded skylines with clear views to Osberton Hall in the South and to distribution centres on the A57. Ryton Farm and Scofton Farm have Red-brick buildings and large-scale agricultural sheds. Scofton village is predominantly red-brick and slate/ pantile roofs with some stone buildings including the Church. Tracks and bridleways cross the area. Bridleway from Scofton to Worksop is an old track with recent hedgerow planting. Sewage-works are located to the south western corner of LCP adjacent to the railway line.

LUAllot	<input type="checkbox"/>	Industrial	<input type="checkbox"/>
Orchard	<input type="checkbox"/>		

Description	The majority of the area is used for intensive cereal production but also there are improved pasture areas used for sheep and cattle grazing. There is one large central area of rough pasture east of East Thievesdale Wood. There are several areas of mixed deciduous woodland - East Thievesdale Wood, Rayton Angle, Coachroad Plantation, Broom Hill Wood and smaller areas of Pine woodland as clumps and thin shelter belt strips. 3 Farms within the area include Carlton Forest, Chequer House, and Bilby Farm, Chequer House has isolated residential properties in association. There are some PROWs and bridleways. The former airfield has now been grassed over although some hardstanding remains. There is some evidence of a former parkland landscape around East Thievesdale Wood and an avenue extending from the northward arm of Thievesdale Lane.
Vulnerability	The main threats are further hedgerow removal, this has already been extensive since Sanderson Plan. The remnants of the former parkland and the avenue may also deteriorate further if they are not managed. The degree of afforestation of the area may change according to forestry practice..

Woodland Cover

Extensive	<input type="checkbox"/>	Hedgerows (trees and shrubs)	<input checked="" type="checkbox"/> Prominent
Interlocking	<input checked="" type="checkbox"/> Insignificant	Ditches	<input type="checkbox"/>

Hedge (shrubs)	<input type="checkbox"/>	Tree line, belts	<input checked="" type="checkbox"/> Apparent

**Woodland Cover /
Boundaries Description**

The coniferous clumps and thin shelter belts consist mainly of Scots Pine. The deciduous woodlands contains a high proportion of Oak. To the northern arm of Thievesdale Lane the former avenue contains mature Oak, Pine, and Ash. The isolated parkland trees include Oak, Beech. Road hedge boundaries are well maintained Hawthorn predominantly, heathy species also present in hedgerows - gorse, bracken. These hedges also contain mature hedgerow trees mainly Oak. New tree planting near to former airfield consists of a new Lime avenue as a south western extension of the older avenue. There are few internal field boundaries, where they are present these are post and wire.

Vulnerability to change

There are many mature Oak trees to woodlands and in road side hedges which may deteriorate with age, there may be further internal hedgerow removal. Parkland and avenue trees may decline further. At present road hedges are very well maintained but this standard could deteriorate with a change in ownership.

Historic Pattern - Description

The Sanderson Plan field pattern has been changed by much hedgerow removal particularly to the western area of LCP which was formerly many small fields, the central area of parkland landscape has become less apparent although remnants including the avenue and isolated trees remain. Much of Scrofton Wood which was once connected to Rayton Angle has been lost. Some Sanderson woodland boundaries remain such as East Thievesdale Wood but the shelter belt planting is a more recent addition.

**Historic Pattern -
Vulnerability to change**

Threats include further loss of historic pattern due to hedgerow removal, further removal of Sanderson woodland boundary pattern as well as the woodlands themselves, changes in the degree of coniferous planting within LCP, decline in condition of mature trees including parkland and avenue trees.

Overall Character Summary Statement

The landform across the LCP is gently undulating and slopes down to the River Ryton valley to the south and east. There are open views to distant wooded skylines and to the south the landform falls away and is well wooded around Osberton Hall, there is some interruption of the medium distance views by thin shelter belts of Scots Pine. The landform falls away to the south to the wooded valley around Osberton Hall outside the LCP. Landuse consists of arable farming with some grazing of sheep and cattle on improved pasture. There is only isolated residential settlement associated with farm properties. There was formerly an airfield to the centre of this area but this has now been grassed over. Woodland consists of small deciduous woodlands with a high proportion of Oak and small clumps of coniferous woodland. The thin Pine belts are a distinct visual feature of the LCP. Road hedge boundaries are well maintained hawthorn, internal field boundaries are mainly post and wire fences. There is a remnant avenue and isolated parkland trees. The main threats to the LCP are further removal of hedgerows, this has already been extensive. There may be changes in degree of afforestation or removal of existing deciduous woodland due to farm intensification. Mature trees, the remnant avenue and road side hedgerows may decline due to poor maintenance and management.

**Woodland Cover /
Boundaries Description**

Fifty Acres wood is coniferous. Forest Plantation is mixed deciduous and coniferous and Hundred Acre Wood has stands of deciduous and coniferous trees. Some smaller scale woodland is mixed with Beech, Sycamore, Oak, Birch, Sweet Chestnut and Scot's Pine. A few coniferous small scale shelter belts/coverts exist.

Road edges are well maintained with few gaps. Predominantly Hawthorn with Elder, Holly, and heathy species such as Bracken and Gorse. Internal field Boundaries are gappy Hawthorn. Some post and rail fencing along hedgerows. There are some hedgerow trees including Oak, Hawthorn along roadside boundaries. Some verges with belts of mature deciduous trees to minor road to the north of area near Winks Wood.

Vulnerability to change

Some forestry could encroach further into farmland as some plantations have expanded since Sanderson's Plan. Farmland could encroach into deciduous woodland. Removal or poor maintenance of hedgerows is also a threat particularly of internal field hedges.

Building Style

Vernacular	<input checked="" type="checkbox"/> Insignificant	Non-vernacular	<input checked="" type="checkbox"/> Apparent
-------------------	---------------------------------------------------	-----------------------	----------------------------------------------

Historic Pattern - Description

The present pattern is smaller regular fields in the south and larger less regular fields further north, this was the case on the Sanderson Plan although there has been hedgerow removal across the whole area. Woodland boundaries remain largely intact except Fifty acres Wood which has increased in size and changed shape since Sanderson's Plan. The parkland areas on the perimeter shown on the plan are no longer apparent. Hodsock Manor Farm is Grade II listed building.

**Historic Pattern -
Vulnerability to change**

Poor management and fragmentation of historic hedgerows leading to loss of historic field pattern. Coniferous woodland could encroach further into farmland and deciduous woodland could be removed due to farm intensification.

Overall Character Summary Statement

Gently undulating landform, sloping from higher ground in the centre of area to the River Ryton in the east and also slopes to west to a lesser extent. Medium and long distance views to wooded skylines outside the LCP boundary. Landform and plantation woodland also obscures some views. Geometric hawthorn hedged field pattern for arable farm use (mainly cereal). Coniferous and mixed plantations cover some areas. Small mixed woodland patches feature on steeper slopes. Industrial area to the south near to Worksop includes Bassetlaw Council Depot and Yard, Tarmac sand Quarry, Caravan Storage, haulage storage, and HWRC on site of former sand pit. Fifty Acres wood is coniferous. Forest Plantation is mixed and Hundred Acre Wood has stands of deciduous and coniferous. Some smaller scale woodland is mixed with Beech, Sycamore, Birch, Oak, Sweet chestnut and Scots Pine. A few coniferous small scale shelter belts/coverts exist. Road edges are mainly well maintained with a few gaps and are predominantly hawthorn with Elder, Bracken, Holly and Gorse. Roadside hedgrows include trees such as Oak. Internal field boundaries are mainly gappy hawthorn. Some forestry could encroach further into farmland as Fifty acres Wood has done since Sanderson's Plan. Some farmland could encroach into the mixed woodland. Further loss of historic field pattern could result due to poor management or further removal of hedgerows.

Description	The majority of this LCP is deciduous woodland with a small western section of coniferous plantation with fringing broadleaved woodland. There is an open area of farmland with pasture and arable crops around Manton Forest Farm, this also has an area of winter caravan storage (or possibly a travellers site.)
Vulnerability	Possible extension of caravan area around the farm, changes in degree of management of woodland areas, changes in the field pattern.

Woodland Cover

Extensive	<input checked="" type="checkbox"/>	Dominant	Hedgerows (trees and shrubs)	<input type="checkbox"/>

Hedge (shrubs)	<input type="checkbox"/>		Tree line, belts	<input type="checkbox"/>	

**Woodland Cover /
Boundaries Description**

Scots Pine plantation woodland to west of LCP with fringing deciduous planting, the remainder is mixed deciduous woodland consisting of birch as the dominant species with Oak, Sweet chestnut, and Beech, also Yew to understorey some trees are very mature.

The Old Coach Road is bordered by outgrown hedges in places including Beech , or isolated trees - including Sweet Chestnut

The internal field boundary hedges vary from very poor to practically none existent with some isolated hedgerow trees, but there is obvious hedgerow replanting in this area. Field boundaries are marked by post and rail/post and wire fences.

2 SINC woodlands - Top Wood/Great Whin Covert and Coach Road Plantation and Kidney Clump acid grassland contained within LCP.

Vulnerability to change

Future poor management and maintenance of deciduous woodland, at the moment active management such as pruning is apparen. Possible removal of stands mature coniferous woodland.

Non-vernacular ☐**Historic Pattern - Description**

Most of the Clumber woodland was present on the Sanderson map and additional woodland has been added since such as Manton Plantation. The agricultural area has been divided up into smaller geometric fields since the time of the plan. Kidney Clump now covers an area marked as heathland or Ling on the Plan

**Historic Pattern -
Vulnerability to change**

Further loss of remaining open areas due to woodland cover or additional creation of field boundaries that were not present on Sanderson Plan.

Overall Character Summary Statement

The LCP is characterised by a gently undulating landform sloping from west to east. There is a central open area of agricultural use with the remainder as coniferous plantation or mixed deciduous woodland. The farmed area consists of mixed pasture and arable landuses with a small area of caravan parking adjacent to the farm. The deciduous woodland has Birch as the dominant species. Field boundary hedges very poorly defined but are being replaced. There are isolated trees to the field boundaries and edges of the Old Coach Road. The pattern of woodland areas is as shown on the Sanderson plan in the Clumber Park area but the agricultural area has been enclosed from heathland since 1835. Threats to the area include further changes in pattern due to extension of the woodland areas or further creation of a new field pattern.

Description	New housing in floodplain within Worksop in south of area, also warehousing/industrial buildings in outskirts of Worksop, with scrubby wasteland. Pastoral land use between Worksop and Osberton Park (sheep grazing). Historic Osberton parkland also includes pasture (sheep grazing) and small lakes. Further north cereal production features within farmland (in wider areas). Further north, there is more pastoral land use. Small scale deciduous woodlands with Poplar plantations throughout the length of the river side beyond Osberton. Rough grazing (horses) to far north of area with larger areas of Poplar planting. Electric cables run across north of area. Various tracks and paths/bridleways run across the area. Railway crosses LCP to East of Worksop. B6045 crosses south of Blyth. B6045 crosses again and minor roads within Worksop town centre.
Vulnerability	Threats include development within flood plain to east of Worksop. Possible contamination of water course due to agricultural run-off. Further increase or removal of Poplar plantations. Osberton Park includes fully mature parkland trees which may decline in condition. Road hedgerow removal/loss is also possible.

Woodland Cover / Boundaries Description

Small holts of deciduous willow, alder, poplar, and ash. Fringes of woodland to the water course include the same species with some Hawthorn and Blackthorn, there are also occasional mature Scot's Pine in the riverside area. Commercial Poplar cultivars are planted along-side the river north of Osberton Park onwards. Mixed deciduous woodland with mature parkland trees feature in Osberton Park. These trees include, Oak, Birch, Sweet Chestnut, Beech, Sycamore and Elm. Lime Avenues run into the LCP within Osberton Park.

Road hedgerows are well maintained Hawthorn, with some Elder. Stone walled bridges where tracks cross the river. Post and wire fencing around grazing areas. Mature Oak trees feature within road/track hedgerows.

Vulnerability to change

Osberton Park features fully mature parkland trees which may decline in condition. Holts are liable to flood damage. Mature trees along river are on the edge of farmed areas and may be damaged by ploughing. Deterioration in management in hedgerows is possible. Poplar plantations could be increased or removed.

Historic Pattern - Description

LCP shape determined by the river course. Osberton Park, features historic parkland with Parkland trees, avenues, lakes and woodland. Irregular fields feature to river's edge. These are larger fields than at time of Sanderson's due to removal of internal hedgerows. Holts remain intact since's Sanderson's period (e.g. Ash Holts), but Poplar woodland has been a later addition. Nearly all of the Holts are SINC's.

Historic features include stone bridges to farm tracks which cross the river. Chesterfield canal bridges, locks and stone architectural features also lock keepers cottage within Worksop fringes.

Historic Pattern - Vulnerability to change

Some loss of hedgerows due to arable land use possible. Historic parkland particularly parkland trees and avenues may decline in condition without careful management. More Poplar stands may be added. Holts which remain as at Sanderson's are still intact but always under pressure from surrounding ag. landuse. Stone bridges vulnerable due to the pressure of heavy farm traffic using farm tracks.

Overall Character Summary Statement

River Ryton follows a narrow flood plain from Blyth to Worksop. Chesterfield Canal runs through LCP in the South . Outer edge of flood plain has a height of 20 ms. River has a height of 14ms. Generally open views out of LCP into open farmland. Osberton Park has shorter distance views obscured by parkland and woods. Within Worksop, development encloses LCP giving shorter views. New housing development features within Worksop in the floodplain . Scrubby wasteland with warehousing on Worksop outskirts. Pastoral land use to river's edge from Worksop outskirts to Osberton Park (MLA) which features sheep grazing within historic parkland. Trees include, Oak, Birch, Sweet Chestnut, Beech, pastoral and arable land use features further north with deciduous woodland holts and more recent Poplar stands. Roadside hedgerows are well maintained hawthorn with some mature Oak trees featuring. Stone walled bridges cross the water and there are post and wire fencing around grazing areas.

Electric cables run through north of area. Various tracks and paths/bridleways run through the area. Railway crosses LCP to East of Worksop. B6045, and a few minor roads in Worksop cross the area.

Osberton Park features fully mature parkland trees, avenues and woodland which may decline in condition if not managed. River side Holts (which are SINC's) are possibly liable to flood damage and under pressure from surrounding landuses. Further removal or deterioration of farm track hedgerows is possible, the Poplar stands could increase or be removed. Stone bridges are vulnerable to pressure of modern farm traffic.

Description Mostly coniferous forestry - various ages, from established plantations to younger, say 10 year old planting. Generally deciduous planting to woodland edges - birch, oak, beech, sweet chestnut etc. Heathy scrub in some verges, gorse and bracken. Arable fields to southern edge, rough grazing in smaller fields near to Carburton in the north. Picnic sites, car parking for recreation in forest, National Cycle network, Robin Hood Way. National Trust to corner of Clumber Park. Clumps of mature beech and yew to south within arable field - former Thoresby Park land.

Vulnerability Fly tipping to car parks and forestry tracks. Possible expansion of recreation activities around Thoresby - car boot sales etc.

Historic Pattern - Description

Former parkland estates, now largely woodland. Regular geometric fields to edges of area.

**Historic Pattern -
Vulnerability to change**

National Trust areas generally well managed.

Historic tree planting surrounded by coniferous plantations.

Possible expansion of car parking and other recreational activities.

Further loss of field boundaries.

Overall Character Summary Statement

Gently undulating landform dominated by coniferous and mixed plantations. Medium sized arable fields to edges of the area. Area encompasses two historic estates - Clumber to the north and Thoresby Park to the south. Remnants of historic features still evident - clumps of parkland trees and lodges. Broad Lane runs west - east - historic lane which probably separated the two estates now forms part of the Robin Hood Way footpath. The National Cycle route also crosses the area. Recreational activity is fairly low key in the area - horse riding, cycling, walking, with small car parks and picnic tables.

Historic Pattern - Description Regular medium sized geometric fields.

Historic Pattern - Vulnerability to change Some loss of hedgerows due to arable landuse. Poor management and fragmentation of historic field pattern.

Overall Character Summary Statement

Gently undulating landform sloping from the north to the River Poulter in the south. More markedly undulating to the north adjacent to the A1. Predominantly arable landuse with a regular geometric field pattern of hawthorn hedges. Hedgerows are largely low and trimmed, and gappy in places. Coniferous plantation block to SE of LCP.

Pylons run north to south through LCP. Bridleway runs along southern boundary. Isolated farms. Busy roads, A1 to north and A614 to west.

Within most of LCP views are enclosed by wooded skylines. To the north there are longer distance views.
