

## Notes

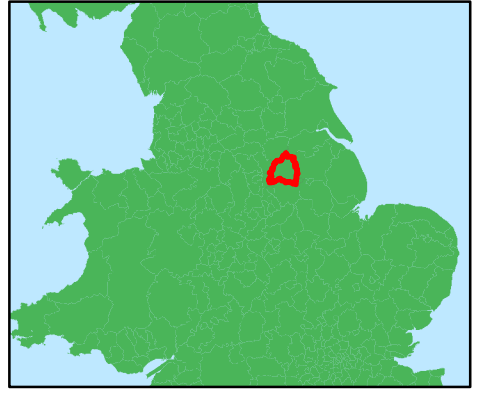

Mapping of surface water flood risk has been taken from the Flood Map for Surface Water (RoFfSW) published online by the Environment Agency. The RoFfSW is derived primarily from identifying topographical flow paths of existing watercourses or dry valleys that contain some isolated ponding locations in low lying areas. They provide a map which displays different levels of surface water

Important: The 2017 SFRA has been developed using the best available information at the time of preparation, taking into account the latest flood risk data and the current state of national planning policy. This relates both to the current risk of flooding from fluvial, pluvial, groundwater, sewers and reservoirs as well as the potential impacts of future climate change.

Appendix H.2 Mapping Supporting Information.docx II flood risk depending on the annual probability of the land in question being inundated by surface water.

Although the RoFfSW offers improvement on previously available datasets, the results should not be used to understand flood risk for individual properties. The results should be used for high level assessments such as SFRA for local authorities.

## Key Plan

## Legend

-  Bassetlaw District Boundary
-  Surface Water Flooding 1 in 30
-  Surface Water Flooding 1 in 100
-  Surface Water Flooding 1 in 1000
