

**Bassetlaw**  
DISTRICT COUNCIL  
— North Nottinghamshire —

# The Draft Bassetlaw Plan: Spatial Strategy: Green & Healthy

Support construction methods that promote sustainable and low carbon design

A commitment to **CARBON OFFSETTING** through tree planting

Greater infrastructure for **Electric Vehicles**

Minimise **flood risk**

Encourage healthy lifestyles through **better design**

## Climate Change

- ✓ A significant number of trees will be planted in community woodlands to promote carbon offsetting - five trees for every additional dwelling that is built.
- ✓ Creating or enhancing natural habitats through development will help wildlife and habitats adapt to climate change.
- ✓ All development proposals are required to consider and address flood risk, both on-site and off-site.
- ✓ The introduction of a Healthy Bassetlaw Design Award.

# OUR VISION

Bassetlaw will look to combat the effects of climate change with the ambition of being a low carbon district.

This can be achieved by incorporating low carbon and energy efficient design techniques and technologies, extensive tree planting, increased opportunities for walking and cycling, and improved access to public transport for new developments. New developments will be committed to providing high quality and accessible open spaces for all residents and will encourage healthy lifestyles.

Development in areas of low flood-risk will have robust flood-risk management.
