Appendix J: Review of LAA sites included in previous iterations of the LAA	
Appendix K: Employment sites	
Appendix L: Lapsed planning permissions reviewed	

1 Introduction

Disclaimer: The Land Availability Assessment (LAA) is a technical document that identifies and assesses potential housing land. The LAA does not make decisions about which sites should be developed, nor change their status within the planning system. Instead, the LAA will be used to support decision-making about future land allocations in the emerging Bassetlaw Plan. The information provided in this document is not binding on any future recommendation that may be made by the Council or any formal decision of the Council through the planning process.

- 1.1 The National Planning Policy Framework (NPPF) states that strategic policy-making authorities should have a clear understanding of the land available in their area through the preparation of strategic housing and economic land availability assessment. From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.
- 1.2 The Bassetlaw Land Availability Assessment (LAA) provides assessments of land availability for housing and economic development in all areas of Bassetlaw. This LAA provides a review of sites included in previous Land Availability Assessments and it assesses new sites submitted since that time (November 2020).
- 1.3 Key outputs include:
 - A list of all sites considered, cross-referenced to location maps
 - For the areas in the Bassetlaw Local Plan:
 - an assessment of each site in terms of its suitability for development, availability and achievability (including whether the site is viable);
 - clearly evidence/justify those which have been discounted;
 - an assessment of the likelihood of sites coming forward and possible timescales for delivery; and
 - the potential capacity of each individual site, along with an overview of site specific constraints and an indication of how obstacles to site delivery may be overcome
 - An indicative trajectory of anticipated development potential.
- 1.4 Sites that are included in the LAA are not precluded from being developed for other suitable uses, while sites that have been discounted or omitted from this stage of the assessment are not necessarily precluded from the possibility of securing planning permission.

- 1.5 This LAA report sets out the methodology, the assessment findings, a discussion of assumptions made, along with an explanation of why particular sites have been assessed as having no development potential at this time.

2 Methodology

Background

- 2.1 In line with the NPPF a local authority is required to identify and update annually 'a supply of specific deliverable sites sufficient to provide five years' worth of housing compared against objectively assessed housing need'. There is also a requirement for local authorities to identify strategic employment sites and to address the specific locational requirements of different employment sectors.
- 2.2 To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development (fewer than 10 dwellings), and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Major sites with outline planning permission, sites with permission in principle, and allocated in the development plan or identified on a brownfield register should only be considered deliverable within five years where there is clear evidence that housing completions will begin on site within five years.
- 2.3 Sites which are identified as deliverable for housing within five years form part of the five year housing land supply, which is published annually in the Five Year Housing Land Supply Statement¹. The assessment also identifies sites which cannot be delivered within five years, but are unencumbered by major constraints and are considered developable. These sites will inform the housing trajectory beyond the next five years.
- 2.4 For a site to be considered developable the NPPF states that it should be 'in a suitable location for housing development and there should be a reasonable prospect that the site is available and could be viably developed at the point envisaged'².

² *National Planning Policy Framework*, Annex 2: Glossary

STAGE 1: Site Identification

2.5 Sites with the potential for small-scale through to large-scale development are considered in line with PPG recommendations. Site density assumptions are set out below.

Site Location	Assumed density (dwellings per hectare)
Within urban areas	40 dph
Edge of urban areas (suburban)	30 dph
Village (suburban)	30 dph
Rural village	20 dph

Table 1. Density assumptions

2.6 Sites which are considered as part of this LAA include:

- Sites with planning permission (full or outline) that are either under construction or not yet implemented
- Sites where the Council has resolved to grant planning permission, subject to the signing of a legal agreement
- Sites submitted in the Call for Sites
- Sites that have been promoted through representations made on the Bassetlaw Local Plan
- Sites from the previous Bassetlaw SHLAA where landowners/agents have provided a renewed expression of interest

2.7 Sites that were submitted in the Call for Sites were required to provide the following information:

- Contact details
- Site address and location plan
- Site size
- Site description (including current use and neighbouring uses)
- Information about highways access and utilities provision
- Site constraints
- Type and scale of development
- Ownership details
- Market interest
- Potential timeframe for development

2.8 It should be noted that, in the Initial Draft Bassetlaw Plan (2016) the Council put forward the concept of developing an entirely new garden village capable of accommodating in excess of 1000 new dwellings, the delivery of which would be anticipated to go beyond

the lifetime of this plan. Several sites have been submitted to the Council for consideration as a new settlement. These are included in the LAA.

- 2.9 The Council will continue to accept new sites on an ongoing basis. New submissions will be assessed and included in each iteration of the LAA. New sites should be submitted using the call for sites form which is available on request from the Planning Policy Team.
- 2.10 NPPG makes clear that plan makers should not simply rely on sites that they have been informed about but actively identify sites and broad locations for development that may have a part to play in meeting the needs of an area through a process of desktop review. As such, where appropriate, sites where planning permission has expired or been refused, and broad locations for development have also been included in the assessment.

STAGE 2: Site Assessments

- 2.11 The flowchart in Appendix A highlights the different stages of assessment, as agreed with Housing Market Area partners. These can be broadly broken down into two stages:
- Screening of sites against a series of fundamental availability and suitability criteria; and
 - Assessment of sites against more specific suitability and achievability/ viability criteria. These include potential physical constraints and the willingness of a developer to invest in a site

Site Availability

- 2.12 Availability is a fundamental element of the assessment criteria. Where a land owner is unknown after all reasonable investigation or does not want to put a site forward for development it will usually be considered unavailable and not warrant further assessment.
- 2.13 A site will be considered available for development if it has been actively promoted for consideration through any call for sites and where the land owner has made clear that the site is available for development. This will be confirmed by information provided by land owners and be free from legal or ownership constraints and/or restrictive covenants. This will often mean that the land is controlled by a developer or landowner who has expressed an intention to develop and/or sell.
- 2.14 Where legal and ownership constraints are identified as being 'unresolvable', sites will be assessed as 'unavailable'. However, it is not uncommon for sites to require some land assembly or require legal agreements to come forward. Where evidence has been provided that those constraints can be overcome this should not be considered as prohibitive to development coming forward.

2.15 Where any potential constraints on availability have been identified then a judgement will be made as to if and how these could reasonably be overcome. Consideration will also be given to the delivery record of the developers or landowners putting forward sites, and whether the planning background of a site shows a history of unimplemented permissions. The promoters of LAA sites will be expected to provide information about land ownership, site availability and any market interest in the site when they suggest a site for inclusion.

2.16 The inclusion of sites with planning permission will reflect the approach the Council applies to all sites currently included within the five year housing land supply. For major sites of 10 dwellings or more where development hasn't commenced, efforts are made to contact landowners, developers and agents to ascertain the current situation and deliverability of sites with extant planning permission. Where deliverability is questionable sites will be discounted.

Site Suitability

2.17 The suitability of sites for residential development will be assessed against policies in the National Planning Policy Framework and in the Bassetlaw Local Plan. Where the development of a site would not comply with planning policy, a judgement is made regarding whether there is any prospect of making a scheme policy compliant.

2.18 Suitability criteria take account of the following criteria:

Stage One:

Sites will be taken forward for a more detailed assessment where they are:

- Capable of delivering 5 or more dwellings and/or 0.25ha or more of economic development
- Predominantly outside of an international, European or nationally designated conservation site (e.g. SSSI)

Stage Two:

Sites will be assessed to identify any physical or environmental constraints such as:

- Level of flood risk affecting the site
- Relationship to neighbouring land uses and surrounding settlement
- Access to and impact on local highways
- Proximity to major transport infrastructure
- Access to key services and facilities
- Hazardous risks and/or contamination
- Site topography/landscape quality
- Impact on designated and non-designated heritage assets
- Land stability
- Pylons or high voltage cables

- Impact on protected species and designated nature conservation sites/habitats

2.19 Sites can be discounted from further assessment at either stage, although the criteria at Stage 1 are more critical. During the second stage a balanced planning judgement will be made, weighed up against all relevant considerations.

2.20 In terms of character, Bassetlaw is a predominantly rural district with significant areas of countryside and a large number of small villages. In this context it is inappropriate to include sites which are extremely unlikely to gain planning consent. Therefore, with the exception of sites assessed for their suitability as a new settlement, sites which have no clear relationship or proximity to the established built form of existing settlements have been assessed as unsuitable.

2.21 Sites with planning permission are included in the Housing Trajectory in Appendix C. The suitability and achievability assessment outcomes of sites without planning permission are listed in Appendix D, E, F, G and H.

2.22 The suitability of sites with planning permission has already been considered through the planning application process. It has therefore been assumed that all sites with planning permission for residential development are suitable for that use.

2.23 Sites that are discounted at this stage (identified as unsuitable) will be recorded as such and will not be assessed further through the Sustainability Appraisal and Site Selection process, in terms of achievability. Sites which are identified as suitable, available and either deliverable or developable will inform the Council's housing land supply trajectory and will be considered as potential site allocations, subject to further detailed assessments.

Site Achievability

2.24 Consideration will be given to the achievability of development on each site.

2.25 Sites will be considered achievable where there is a reasonable prospect that housing or economic development will be completed on the site at a particular point in time. This is primarily a judgment about the economic viability of a site and the capacity of a developer to complete and let/sell a development at a competitive return while generating a land value sufficient to persuade a landowner to sell. However, this stage of assessment also considers market factors such as the presence of bad neighbours and the economic viability of existing uses, cost factors, such as expenditure on site preparation to overcome identified physical constraints, and delivery factors such as the developer's own phasing schedules.

2.26 Those sites which earlier in the assessment have been identified as suitable, but are not considered available for development, have been assessed as 'unachievable' because

there is not a reasonable prospect that they will be developed at a particular point in time during the plan period covered by the LAA.

Overcoming constraints

2.27 Where significant constraints have been identified through the site survey and assessment stages, consideration has been given to the actions that may be required to address them. As such, efforts have been made to reflect the timescales that could be involved in doing so and whether this may have any effect on the viability of a site. Landowners may submit additional evidence to demonstrate how constraints may be overcome. Later iterations of the LAA will be updated to reflect any changes in light of new evidence.

Assessment Assumptions

2.28 **Developable area:** The Council will estimate the development potential of a site where this information has not been provided, or the information provided is considered to be inaccurate or inconsistent with other sites of similar characteristics.

2.29 When developing sites, it is usual for a proportion of the land to be given over to on-site infrastructure requirements such as access roads, public open space or other ancillary uses. Where a site is larger more area will normally be given over to infrastructure. Developable areas are calculated on the following assumptions (Site size (hectares) = Developable area):

Site size	Developable area
<0.65 hectares	100%
0.65 – 5.99 hectares	90%
6.00 – 10.00 hectares	80%
>10.00 hectares	60%

Table 2: Developable area assumptions of residential sites

2.30 The potential of any site will also be informed by the other assessment criteria, and it is recognised that some sites will have a higher or lower capacity due to physical constraints and proposed use.

2.31 **Relationship with associated settlements:** One of the most common factors that will determine a site’s potential suitability is its relationship with the settlement to which it associates. With the exception of sites submitted for consideration as a new settlement, to be considered suitable a site must be in or adjacent to the existing developed footprint of the settlement. Sites separated from the development boundary may be considered suitable where they adjoin another site which does adjoin a development boundary.

2.32 The development footprint of a settlement is defined as the continuous built form of the settlement and excludes:

- Individual buildings and groups of dispersed, or intermittent buildings, that are clearly detached from the continuous built-up area of the settlement;
- Gardens, paddocks, and other undeveloped land within the curtilage of buildings on the edge of the settlement where land relates more to the surrounding countryside than to the built-up area of the settlement; and
- Agricultural buildings and associated land on the edge of the settlement

Deliverable and developable sites

2.33 In accordance with the NPPF and PPG³, sites with extant full planning permission and minor sites (of 9 or fewer dwellings) with outline planning permission are considered deliverable i.e. housing delivery within the first five years of the Plan. Other sites identified in the Call for Sites where the principle of development is acceptable (e.g. within existing development boundaries and unaffected by any significant site constraints) are considered to be developable beyond five years.

2.34 Irrespective of the Council's five year supply position and the implications of NPPF, some sites will also be considered 'deliverable (subject to policy change)' in the Land Availability Assessment where they have no significant constraints to delivery. This judgement will inform the housing trajectory for the plan-making process not the five year land supply assessment process.

2.35 Sites will be considered deliverable where there is evidence of a developer's intention to submit a planning application in the near future (for example where pre-application advice has been provided and the Council has been informed of the landowner/developer's intention of submitting a planning application), and where a site is being promoted through the plan-making consultation process provided that there are no significant physical, environmental or policy constraints.

2.36 Although some of these sites could potentially begin to see completions within years four and five of the current five year period, these will not be included in the Council's five year housing land supply as it is too early in the plan preparation process for proposals to carry any material weight. This is particularly the case where a change in policy is required to support the principle of development.

2.37 Engagement with the development industry is a critical element of determining whether the identified supply of housing and employment land is deliverable. When preparing updates of housing and employment land supply, BDC engage with planning

³ <https://www.gov.uk/guidance/housing-and-economic-land-availability-assessment>

agents, developers and landowners to clarify their current position and anticipated timescales for sites coming forward and/or projected build and completion rates. This information is added to existing monitoring data, such as previous completion rates, known market interest and data from planning applications, indicating lead-in times for different stages of the planning and delivery processes.

2.38 In addition, an assessment of past housing delivery rates from 2016 to 2020 has been undertaken. This demonstrates that lead in periods are relatively short in Bassetlaw. A similar exercise has been undertaken for employment land delivery rates.

2.39 Taking into consideration historic trends and discussions with the development industry, the following development lead-in timescales have previously been identified:

Key Stages	Timescale (months)		
	Outline Application	Reserved Matters	Full Application
Determination of planning application	4	4	4
S106 (signed)	6	-	6
Discharge conditions	3	3	3
Site preparation	-	3	3
Time to first completion	-	4	4
Sub total	13	14	20
TOTAL		27	20

Table 3: Development lead-in times

2.40 It is likely to take at least 27 months from an outline permission being granted to the first completions on site, assuming there are no delays in getting all reserved matters granted, conditions discharged and legal agreements complied with (see Table 3). For full planning applications, the timescale is approximately 20 months.

2.41 Meetings with a range of developers and Registered Providers were held early in October 2020 to gain an understanding of development constraints and their future plans for delivering new homes in Bassetlaw. This is particularly relevant following the impact of Covid 19 and Brexit. The following constraints to housing delivery were cited by developers and registered providers:

- Whilst the Covid 19 lockdown had an initial impact on ceasing or reducing housing delivery, rates have increased to pre-lockdown rates;
- Brexit is having an impact on labour supply in the building industry. In particular, bricklayers are in short supply. This could impact on housing delivery rates in the coming months and years;

- Modern methods of construction (for example flat pack homes) are expensive to produce and are not expected to be rolled out in large numbers at the present time;
- Demand for housing remains strong with rise in demand from buyers not being met by new properties coming on to the market. This imbalance could keep prices high.
- Registered providers who deliver both market and affordable homes are currently concentrating on only delivering affordable homes due to lending restrictions and uncertainty in the market.

2.42 Engagement with a range of developers and agents were held early September/October 2020 and also in July 2021 (for logistics) to gain an understanding of development constraints and their future plans for delivering new employment development in Bassetlaw. This is particularly relevant when considering post Covid and Brexit implications. This informed the delivery rates identified in the Housing and Economic Development Needs Assessment 2020 and the approach taken in the Logistics Assessment 2021. It is acknowledged that unlike housing delivery rates, employment delivery is more likely to be site/business specific, and led by the demand from the market. This reflects the views of developers and reflects past delivery rates and current development activity in the District.

2.43 Taking into consideration views of the development industry, historic delivery trends in Bassetlaw, and the economy post Covid, the lead-in periods have been revisited; it is not considered necessary to revise them at this point. This will be monitored annually and revised if trends show any change in lead in times.

2.44 Historic build rates in Bassetlaw for the majority of sites over 50 dwellings is in excess of 40 dwellings per annum for a full development year (i.e. once the site is established following site preparation). Although such sites can have a wide range of delivery rates - ranging from 90 dwellings per annum to 6 dwellings per annum in a small number of cases.

2.45 Lichfields “Stock and Flow: Planning Permissions and Housing Output, January 2017”⁴ sets out that sales outlets typically generate 30 to 40 sales per annum. This is consistent with the views of volume house builders and past delivery trends in the District that large scale sites developed by a single volume house builder will have an average build rate of 30-35 dwellings per annum. Therefore, the Council has taken a prudent approach in assuming a delivery rate of 30 dwellings per annum unless written evidence is provided by an agent or developer. This information is detailed in Appendix A.

⁴ <https://lichfields.uk/media/2517/stock-and-flow-planning-permissions-and-housing-output.pdf>

- 2.46 Historic build rates also demonstrate that, once commenced, smaller sites of between 10 and 50 dwellings generally deliver within five years. The Council has therefore used this to inform delivery of such sites.
- 2.47 The loss of dwellings, demolitions and change of use from residential to another use, is deducted from the overall supply, however, this is typically a low figure in Bassetlaw.
- 2.48 **Density of development:** A density of 30 dwellings per hectare is used to provide an indication of potential site capacity where landowners/agents have not stated a preferred number of residential units for a particular site. It is, however, recognised that higher densities may be appropriate on sites where less on-site infrastructure is required (e.g. on sites in town centres and other locations that are well served by public transport, or where surrounding development density is at a higher level). Similarly, in rural areas it will be likely that lower densities will be more appropriate and density of development will not be uniformly imposed on prospective development sites.

STAGE 3: Windfall Assessment and Historic Lapse Rates

- 2.49 Windfall sites are those 'sites not specifically identified in the development Plan'. The NPPF, 2021 paragraph 71 as well as the PPG state, that where justified, windfall sites can contribute towards housing supply. However, there is an emphasis that this should be on the basis of 'compelling evidence that they will provide a reliable source of supply'.
- 2.50 Monitoring records show that since 2011 windfalls have consistently delivered a significant proportion of Bassetlaw's housing completions. However, this must take into account that since 2011 the District has not had a site allocation DPD so all development by definition is classified as windfall.
- 2.60 Analysis of past completions shows that, over the past 10 years, 1149 new dwellings have been built on sites of 9 or less dwellings that have not been allocated but may have been identified in previous LAAs in or adjoining settlements.
- 2.61 This gives an average of 115 dwellings per annum completions on small sites. The Council therefore considers that based on this evidence a 100 dwellings allowance would be representative of a realistic windfall allowance in the housing supply in the Local Plan.

STAGE 4: Assessment Review

- 2.62 Once the sites and broad locations have been assessed, the development potential of all sites can be collected to produce an indicative trajectory, setting out how much housing development can be provided and at what point in the future. A similar

process has been undertaken in the HEDNA for employment land. This is caveated with an assessment of the likelihood of sites coming forward as anticipated.

- 2.63 In addition to newly submitted or identified sites, sites assessed in previous iterations of the Land Availability Assessment are reviewed and assessments are updated where changes have occurred with regard to a sites suitability, availability and deliverability.
- 2.64 Where insufficient sites are identified to meet local need the Council may look on a site by site basis at any constraints identified to see if these could be reasonably overcome. If there is clear evidence that the needs cannot be met locally, it will be necessary to consider how these needs might be met within the wider HMA area in accordance with the duty to cooperate.

STAGE 5: Final Evidence Base

- 2.65 Sites included in the Land Availability Assessment will be categorised on the following basis:
- Unsuitable and/or Unachievable
 - Deliverable within 0-5 years – either ‘now’ or ‘subject to policy change’
 - Developable beyond 5 years
- 2.66 The appendices to this report contains the following information:
- The LAA Methodology Flowchart
 - Site Plans
 - Bassetlaw Local Plan Housing Trajectory (2020 to 2037)
 - A list of assessed LAA potential housing sites without planning permission (Appendix C, D, E, F, G, and H), cross-referenced to location maps (Appendix B). This consists of:
 - an assessment of each site in terms of its suitability for development, availability and achievability;
 - Reasoned justification where sites have not been taken forward for further consideration as a site allocation.

3 Housing Need and Supply in Bassetlaw District

Local Housing Need

- 3.1 The NPPF requires Local Plans to meet identified housing need unless any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in the NPPF taken as a whole, or specific policies in the Framework indicate development should be restricted.
- 3.2 Current housing targets in the publication version of the Bassetlaw Local Plan are based on a calculation of housing need using the Standard Method, as identified by the Housing and Economic Needs Assessment PPG⁵ and a further assessment of need in relation to economic growth and affordable/specialist housing needs in Bassetlaw up to 2037.
- 3.3 The Regulation 19 Publication Bassetlaw Plan sets the housing target from 2020 to 2037 at 10,047, which equates to 591 dwellings per annum.
- 3.4 The Bassetlaw Local Plan Housing Requirement differs from the current annually published Bassetlaw Five Year Housing Land Supply Statement⁶ housing requirement figure which uses the Standard Method target of 288 dwellings per annum. This approach accords with national guidance⁷ as the current Core Strategy was adopted over five years ago (in 2011).

Housing Land Supply

- 3.5 Table 4 provides detail on Bassetlaw's current Housing Land Supply at 1st April 2021 (sites with planning consent, Neighborhood Plan Allocations, and windfall allowance). This is the status of the land supply before any site allocations are identified in the Local Plan and the Worksop Central DPD.

TOTAL	3818	2921	1418	402	8559
Housing Requirement	2955	2955	2955	1182	10,047

Table 4 Existing land supply (not including LAA sites without planning consent)

* includes completions in 20/21

Area/Settlement	Number of dwellings with planning permission at 1/04/2021
Worksop (including DPD area)	1228
Retford	798
Harworth & Bircotes	1676
Large Rural Settlements	1171
Small Rural Settlements	1188
Other Villages/Countryside	56

TOTAL	6117
--------------	------

Table 5: Number of dwellings with planning permission by sub-area

3.6 With regard to sites with planning permission as at 1st April 2021 the supply in Bassetlaw was 6117 dwellings. Table 5 shows the distribution of dwellings with planning permission in each area of the District.

3.7 With regard to Neighbourhood Plan site allocations, there are **eight** made Plans which contain site allocations. There are also a number of draft Neighbourhood Plans in progress which are seeking to allocate land for housing. The Housing trajectory (Appendix C) sets out the number of deliverable and developable dwellings (on sites without planning permission) which are allocated in made Neighbourhood Plans.

Neighbourhood Plans	Number of dwellings from allocated land without planning permission at 1/11/2020
Large Rural Settlements	202
Small Rural Settlements	261
Other Villages	4
TOTAL	467

Table 6: Number of dwellings from sites without planning permission allocated in Neighbourhood Plans

Housing supply from deliverable and developable LAA sites without planning consent

3.8 The assessment of LAA sites has established that there is a sufficient supply of potentially suitable sites currently without planning consent. The tables below provide details of potentially suitable sites in Worksop, Retford, Harworth & Bircotes, and Tuxford. The total number of dwellings from this source equates to 7012 dwellings. There are also other LAA sites without planning consent located in the large and small rural settlements. These will be considered through the Neighbourhood Planning process.

3.9 The sites in the following tables have been taken forward for assessment through the Sustainability Appraisal and Habitats Regulation Assessment process and are identified as 'reasonable alternatives'. Results from the SA and HRA will inform decisions made on the suitability of sites for allocation in the Local Plan. The Bassetlaw Site Selection Paper 2021 includes details of the sites proposed for allocation and the reasoned justification.

Table 7. Harworth & Bircotes - LAA sites without Planning Consent

LAA Ref.	Address	Capacity (No. Dwellings)
LAA194	Land off White House Road	15
LAA222	Land off Blyth Road	178
LAA225	Land east of Styrrup Road	76
LAA226	Land south of Common Lane	78
LAA227	Rear of Corner Farm, west of Tickhill Road	12
LAA242	Brookside Walk/Thorsby Close	105
LAA288	Land off Thornhill Road	209
Potential minimum number of dwellings on LAA sites without planning consent		673

Table 8. Retford - LAA sites without Planning Consent

LAA Ref.	Address	Capacity (No. Dwellings)
LAA002	Montagu House, London Road	5
LAA012	East of the Drive	70

4 Conclusion

- 4.1 The housing requirement for the period 2020 to 2037 is 10,047 dwellings.
- 4.2 With regard to planning permissions, the housing land supply currently equates to 6117 dwellings.
- 4.3 The number of dwellings from Neighbourhood Plan Allocations without planning permission currently equates to 467 dwellings. It is expected that this will increase as more Neighbourhood Plans are in the process of being produced.
- 4.4 An allowance has been added to the supply in anticipation of the minimum number of dwellings expected to be delivered on windfall sites. Past housing delivery has informed this allowance. A minimum of 1200 dwellings is expected beyond year 6 of the Local Plan.
- 4.5 Following the production of a Masterplan for Worksop Town Centre the Council is progressing with the preparation of the Worksop Central Development Plan Document. A call for sites was undertaken and Regulation 18 consultation took place in June - July 2021. It is expected that the DPD will deliver 700 dwellings by 2037 contributing to meeting the housing requirement identified by the Local Plan's spatial strategy. Following the granting of planning permission 75 are included in the supply as commitments.
- 4.6 The minimum number of dwellings from LAA sites which are potentially suitable subject to policy change equates to 7012 dwellings (detailed assessments can be viewed in the appendices). These sites have been taken forward for further assessment through the Sustainability Appraisal and Habitats Regulation Assessment process. This will inform the Local Plan Site Selection process.

Housing Requirement 2020 to 2037	
Bassetlaw Plan Total Housing Requirement 2020 to 2037	10,047 dwellings
Current Housing Supply	
Current planning consents	6117 dwellings
Current Made Neighbourhood Plan allocations	467 dwellings
Windfall allowance (expected)	1200 dwellings
Total supply as at 1 April 2021	7784 Dwellings
Potential Capacity from LAA sites without Planning Consent	
Potential Housing Supply from LAA sites without planning consent (to consider for allocation in the emerging Local Plan)	7012 dwellings

Table 11: Bassetlaw Plan Housing Requirement and Housing Land Supply 2020 to 2037

Glossary of Terms

Agricultural Land: Agriculture is defined by Section 336(1) of the Town and Country Planning Act 1990 as including: horticulture, fruit growing, seed growing, dairy farming, the breeding and keeping of livestock (including any creature kept for the production of food, wool, skins or furs, or the purpose of its use in the farming of land), the use of land as grazing land, meadow land, osier land, market gardens and nursery grounds, and the use of land for woodlands where that use is ancillary to the farming of land for other agricultural purposes. The quality of agricultural land is traditionally assessed by DEFRA to fall into one of six grades, in order that the Planning System can consider the effect of development proposals on agriculture.

Annual Monitoring Report: A report which is produced annually to establish what is happening in the district now and what may happen in the future, comparing trends against existing Local Plan policies to determine if changes need to be made.

Brownfield Land: Land which is or was occupied by a permanent structure, including the curtilage of the developed land (although it should not be assumed that the whole of the curtilage should be developed) and any associated fixed surface infrastructure. This excludes: land that is or was last occupied by agricultural or forestry buildings; land that has been developed for minerals extraction or waste disposal by landfill, where provision for restoration has been made through development management procedures; land in built-up areas such as residential gardens, parks, recreation grounds and allotments; and land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape.

Conservation Area: An area designated by a Local Planning Authority under Section 69 of the Planning (Listed Buildings and Conservation Areas) Act, 1990, regarded as being an area of special architectural or historic interest, the character or appearance of which is desirable to preserve or enhance.

General aviation airfields: Licenced or unlicenced aerodromes with hard or grass runways, often with extensive areas of open land related to aviation activity

Greenfield Land: See Brownfield Land

Heritage asset: A building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest. It includes designated heritage assets (e.g. Listed Buildings) and assets identified by the local planning authority (including local listing).

High Risk Floodzone: Land located in Floodzone 2 or Floodzone 3

Local housing need: The number of homes identified as being needed through the application of the standard method set out in national planning guidance (or, in the context

of preparing strategic policies only, this may be calculated using a justified alternative approach as provided for in paragraph 60 of this Framework).

Local plan: A plan for the future development of a local area, drawn up by the local planning authority in consultation with the community. In law this is described as the development plan documents adopted under the Planning and Compulsory Purchase Act 2004. A local plan can consist of either strategic or non-strategic policies, or a combination of the two.

Local Wildlife Site: Locally designated sites that are considered to have county-level biological or geological significance

Special Protection Areas: Areas classified under regulation 15 of the Conservation of Habitats and Species Regulations 2017 which have been identified as being of international importance for the breeding, feeding, wintering or the migration of rare and vulnerable species of birds.

Site of Special Scientific Interest (SSSI): Sites designated by Natural England under the Wildlife and Countryside Act 1981.

Transport assessment: A comprehensive and systematic process that sets out transport issues relating to a proposed development. It identifies measures required to improve accessibility and safety for all modes of travel, particularly for alternatives to the car such as walking, cycling and public transport, and measures that will be needed deal with the anticipated transport impacts of the development.

Transport statement: A simplified version of a transport assessment where it is agreed the transport issues arising from development proposals are limited and a full transport assessment is not required.
